Power-Zone™ 4 low voltage switchgear (class 6037)

#### Power-Zone<sup>™</sup> 4 Low Voltage Switchgear with Masterpact<sup>™</sup> Circuit Breakers

The Square D<sub>☉</sub> Power-Zone <sup>™</sup> 4 low voltage metal-enclosed drawout switchgear is designed to provide superior electrical distribution, protection, and power quality management. The prime components of the switchgear are the Masterpact<sup>™</sup> NW and NT ANSI rated circuit breaker. Power-Zone<sup>™</sup> 4 switchgear is designed to maximize the functionality of the Masterpact circuit breakers, which, in turn, deliver maximum uptime, system selectivity, ease of maintenance, and reliable circuit protection. All of these features are packed into the smallest footprint available for low voltage drawout switchgear.

- Power-Zone™ 4 is designed and built to ANSI

   C37.20.1, CSA C22.2 No. 31, UL

   1558

   Masterpact™ NW and NT drawout low voltage power circuit
- Masterpact<sup>™</sup> NW and NT drawout low voltage power circuit breakers are designed and built to ANSI C37.13 and C37.16. Listed to UL 1066
- Short-circuit current rating up to 200 kA at 240Vac, 480Vac and up to 130kA at 600Vac without fuses
- High short-time withstand ratings up to 100 kA for 30 cycles, minimum
- Arc flash limiting (L1F) Masterpact™ NW feeder breakers available in 800, 1600, and 2000 ampere ratings
   Available in Arc Resistant construction certified to
- Available in Arc Resistant construction certifier ANSI C37.20.7. Please refer to page DE12-3
   Antipal Formation and the formation of the second s
- Optional Energy reduction maintenance switch
   Family of field installable and upgradeable Micrologice trip with white still and the superstription of the start start start of the start start start of the start s
- units with optional data communications features • Power-Zone™ 4 switchgear can offer optional
  - data communications capability:
    Direct Ethernet Modbus TCP to each Circuit Breaker (IP address per Circuit Breaker)
    - Modbus RS485 from each Circuit Breaker converted to Ethernet Modbus TCP in instrument compartment for customer Modbus TCP connection
  - Modbus RS485 Wired Out to instrument compartment for customer Modbus RS485 connection
  - Smallest equipment footprint available in this product class
- Front access to control and communications wire connections
- Bolted copper bus provided as standard (up to 6000 amperes maximum)
- Large rear cable compartment pull area allowing maximum room for power cables
- Horizontal Bus provision for future equipment expansion
- System designed for maximum uptime with low maintenance
- Modular circuit breaker designed for easy addition of control accessories

Masterpact<sup>™</sup> NW circuit breakers are available in various levels of interrupting ratings from 42 to 200 kA at 480 volts and up to 130 kA at 600 volts. The Masterpact<sup>™</sup> NT circuit breaker is available in

The Masterpact<sup>™</sup> NT circuit breaker is available in an 800 ampere frame size and 42 kA at 480 volts interrupting rating. Up to 8 Masterpact<sup>™</sup> NT circuit breakers can be mounted in a 30-inch wide section. (Not available for 600 volts.)

Circuit breakers of like frame sizes and interrupting ratings are interchangeable.

## Micrologic<sup>®</sup> Trip Units

A modern family of field-installable trip units is available with Masterpact NW and NT circuit breakers. The circuit breaker overcurrent protection consists of a microprocessor-based tripping device that requires no external power source. The complete tripping system has three main components: the air-core sensors, the trip device (with rating plug), and the trip actuator. The microprocessor-based trip unit uses true RMS current level sensing.

The Powerlogic <sup>®</sup> system is used in conjunction with Micrologic Type A, Type P, and Type H trip units for the Masterpact NW and NT circuit breakers. Modbus industry standard data communications allow the Powerlogic system to replace discrete meters, multiple transducers, analog wires, and analog-to-digital conversion equipment. Extensive information can be transmitted over a single communications cable to a Powerlogic system display, a personal computer, programmable logic controller, or other host system. Basic circuit information, such as amperes, can be monitored using Micrologic Type A trip unit. Circuit breaker remote operation is available using the Micrologic Type P and Type H trip units with Powerlogic functionality. In addition to its metering capabilities, the Micrologic trip unit system is available with optional status inputs and relay outputs for monitoring discrete contacts and remote control of devices by way of the data communications channel.

Micrologic trip unit metering functions include:

- Amperes and volts
- Frequency
- Power
- Power demand
- Energy
- Energy demand
- Power factor
- Power quality measurements
- Communications
- Fault waveform capture
- Waveform capture
- Data logging
- Programmable contacts
- Current unbalance
- Over/under voltage
- Over/under frequency
- Voltage unbalance
- Phase loss
- Phase sequence
- Reverse power
- Long time imaging
- Contact wear indicator
- Masterpact circuit breaker maintenance information

## Switchgear

## Low Voltage Metal-Enclosed Drawout Class 6037 / Refer to Catalogue 6037CT9901

Arc Resistant Power-Zone™ 4 Low Voltage Switchgear (Class 6037)

#### Power-Zone<sup>™</sup> 4 Arc Resistant Switchgear with ArcBlok<sup>™</sup> Technology

#### Protecting Your Personnel and Equipment from an Arc Flash

Power-Zone<sup>™</sup> 4 arc resistant switchgear with Masterpact<sup>™</sup> NW ArcBlok<sup>™</sup> technology offers patented, superior arc flash protection for operators and maintenance personnel. The arc flash containment features are unique to the industry in both the circuit breaker compartment and the structure.

Power-Zone<sup>™</sup> 4 Arc Resistant Switchgear with ArcBlok<sup>™</sup> Technology is certified to comply with ANSI C37.20.7 IEEE Guide for Testing Metal-Enclosed Switchgear Rated Up to 38 kV for Internal Arcing Faults, and third-party (UL) witnessed as arc resistant switchgear.Refer to Data Bulletin 6037DB1302 for the complete UL Witness Certification Summary.

#### Features

- Masterpact<sup>™</sup> NW circuit breakers with patented ArcBlok<sup>™</sup> technology (up to 5000 A)
- · Rated for systems with up to 100kA, 635V fault current
- 60 in. (1524 mm) deep x 22 in. (559 mm) wide (smallest arc resistant footprint in the industry)
- 22 in. (559 mm), 36 in. (914 mm) section widths
- 60 in. (1524 mm), 72 in. (1829 mm), 80 in. (2032 mm) section depths
- · Internal arc gas management system for optimized cooling
- ANSI Type 2B Rating
- Type 1 enclosures

#### **Available Options**

- · Insulated copper bus
- · High-resistance grounding
- Zone selective interlocking
- Energy reduction maintenance switch
- · Section barriers (rear, cable, and side)
- · Circuit breaker remote racking
- ANSI Type 2B rated arc plenum exhaust
- Direct Ethernet Modbus TCP connection to each Circuit Breaker (IP address per Circuit Breaker)

MiniBreak switch enclosure with fuses (class 6042)

Listed metal-enclosed interrupter switchgear

#### MiniBreak<sup>™</sup> Compact Height Switches - 5.5 kV-200 Amperes

The Square D<sup>®</sup> MiniBreak compact height switch enclosure is only 66-inches high and contains a single 3-pole load interrupter switch, rated 5.5 kV and 200 amperes. Enclosures are free-standing and suitable for both indoor (NEMA 1) and outdoor (NEMA 3R) applications. These switches are available unfused or

with provisions for Square D<sup>®</sup> current-limiting fuses rated from 10E amperes to 200E amperes. Factoryinstalled accessories include an auxiliary switch, strip heaters, and provisions for a "lock open" only key interlock. The door is mechanically interlocked with the switch operating handle. Set screw cable lugs for #14 solid—2/0 stranded aluminum or copper cable are provided for two line and one load connections. Fuses are not furnished with this equipment. For fuse information and pricing see table below. The Fused switches and many of the fuses listed below are available from stock.

Listed metal-enclosed nterrunter switchgea

#### HVL/cc Metal-Enclosed Load Interrupter Switchgear—Full Range

The Square D<sup>®</sup> HVL/cc metal-enclosed load interrupter switchgear provides switching, metering, and interrupting capabilities for medium voltage electrical power distribution systems and is designed and tested per applicable ANSI/IEEE and NEMA standards.

Made up of modular units, the HVL/cc is easy to expand. Two main bus positions allow future extensions and connections to existing equipment.

HVL/cc switchgear is available in either single or multiple bay units. The design is compact, with front accessibility.

The HVL/cc switch can be equipped with either an overtoggle mechanism (OTM), which is standard, or an optional stored energy mechanism (SEM). An option with both mechanisms is the Fuselogic™ system. The Fuselogic system offers fuse tripping (with SEM) to provide protection against single phasing loads when a fuse has blown. It also has a mechanical interlock to prevent inadvertent switching until fuses have been installed or blown fuses have been replaced.

The HVL/cc enclosure is designed for front access only and can be positioned against walls, in small rooms or in pre-fabricated buildings. The small footprint can result in considerable cost savings from the reduction of building or room sizes.

- Fuselogic<sup>™</sup> system
- Infrared viewing windows
- Class I, Division 2
- Fast auto transfers
- Duplex configurations
- Protective relaying Powerlogic<sup>®</sup> metering
- 20-inch or 29.5-inch wide enclosures

#### Fuseloaic™

Fuselogic is a protection system that provides the ultimate in medium voltage fuse protection. This patented system

utilizes the Square  $D^{\textcircled{R}}$  current-limiting fuses with mechanical sensors that function without any auxiliary power requirements. Several combinations of Fuselogic

functions can be combined to provide simple blown fuse indication contacts with mechanical lockout to antisingle phasing protection. Anti-single phasing requires the optional stored energy mechanism (SEM). Fuselogic is available on both HVL/cc and HVL switches.

#### Switchgear Standard Features

- Compartments: Switch, bus, fuse/cable, mechanism, and optional low voltage/control
- 11 gauge steel enclosure
- Epoxy insulators
- Fuse/cable access panel interlocked with switch
- Front access only
- Animated mechanism mimic bus
- Padlocking open or closed provision
- Top or bottom cable entry
- UL/CUL Listed
- Live line indicators on all incoming switch bays and outgoing feeder circuits
  - Cable lugs included for one cable per phase
- Tin plated copper bus for lineups

#### Surae Arresters

5 kV Indoor N1 top cable in/bottom cable out switch in position B

#### HVL/cc Switchgear—Quick Ship Program - 5–15 kV, 600 Amperes

The HVL/cc quick ship program provides basic fused and unfused load interrupter switch configurations for standalone or transformer primary applications. The Quick Ship program offers faster delivery, but with fewer options. Three-pole, 600 ampere individual HVL/cc switches are available in free-standing indoor (NEMA 1) enclosures. These switches are available unfused or with

provisions for Square  $D^{\textcircled{R}}$  current-limiting DIN/E fuses. Factory optional accessories include auxiliary bays, main bus, auxiliary switches, extra cable terminating lugs, and distribution class surge arresters. The fuse access panel is mechanically interlocked with the switch mechanism. Key interlocks are not an available option with Digestlisted HVL/cc switches. (1) Set screw type lugs for (2) #2-350 kcmil copper or aluminum cables are provided for line and load connections. Fuses are not furnished with this equipment. For fuse information and pricing refer to page DE12-5.

#### **Provisions for Future Expansion**

All "single" HVL/cc switches have provisions for future expansion on either side.

Order main bus kits for copper 600 ampere bus. Include sketch for factory-assembled parts or lineups.

#### 600 Ampere Single Switch Unfused

Manual over-toggle mechanism, no grounding switch Includes (1) set screw lug for (2) #2-350 kcmil Cu or Al conductor per phase

Application A = Top entry (incoming-cable or main bus), bottom exit (load-cable or main bus)

Application B = Bottom entry (incoming-cable or main bus), top exit (load-cable or main bus)

Switches with transformer connections are painted ANSI 49. Standalone switches are painted ANSI 61. Transformer connections in HVL/cc switches are based on Square D<sup>®</sup> standard transformer connections. If these switches are used to connect to other manufacturers' transformers, then connections must match Square D connections. (Cable connections

#### General Purpose E-Rated Current-Limiting Fuses:Type DIN/E for HVL/cc Switches

15

Integrated rating for 600 ampere HVL/cc switches with Square D<sup>®</sup> DIN/E fuses listed below is 65 kA rms symmetrical amperes. (50 kA rms for 630 ampere fuse.) Current-limiting fuses increase the integrated short-circuit current rating because of their energy-limiting capabilities.

To increase the short-circuit current rating of the entire lineup of switchgear, current-limiting fuses must be used in the entrance sections.

#### **Ordering Information**

- 1. Select switch catalog number based on fused or unfused and cable entry locations (top or bottom) from table on page DE12-4.
- Select incoming line auxiliary bay from table on page DE12-4, if required.
- Select main bus from table on page DE12-4, if required.
- 4. Select catalog numbers for factory modifications from table on page DE12-4, if required.
- 5. If fused, select DIN/E fuses.

Listed metal-enclosed interrupter switchgear

#### HVL Metal-Enclosed Load Interrupter Switchgear—Full Range

HVL<sup>™</sup> 5–38 kV Load Interrupter is the most popular ANSI-rated switchgear in its class in America. Among medium voltage interrupter switchgear, both the switch and the enclosure stand as industry benchmarks in the areas of design, manufacturing, and performance. Load interrupter switchgear must perform a number of critical functions in a unit substation - protecting equipment and disconnecting faulted lines and transformers. Designed and tested to the latest applicable standards, HVL has been engineered to provide superior protection for your distribution system.

HVL switchgear is available for Various applications and configurations, including:

Individual service entrance bays
Multiple-bay lineups incorporating HVL load

interrupters and optional Visi/Vac<sup>®</sup> circuit interrupters

Square D  $\ _{\ensuremath{\scriptscriptstyle \mathbb{R}}}$  metal-enclosed switchgear has become an

industry standard for its better system

performance, lower maintenance cost, easier system expansion, and reduced system expense.

A full range of ratings and options are available but not listed in this publication. Contact your nearest Exmas International Solutions

Electric sales office or your local Exmas International Solutions Electric distributor.

#### **Standard Features**

- 11 gauge steel enclosure
- Direct drive mechanism
- Permanently attached operating handle
- Visible isolation viewing window
- Mechanical interlocked fuse access door
- Provision for padlock and key interlock
- Highly flexible design
- ANSI 61 paint

#### Options

- Outdoor construction
- Square D<sup>®</sup> DIN-style current-limiting fuses
- Boric acid fuses
- Silver or tin plated copper bus
- 600, 1200 or 2000 ampere main bus
- Heat shrink insulated bus
- Motor operator
- Shunt trip
- Fuselogic™ tripping system
   Automatic load transfer schemes
- Roof bushings
- Key interlocks
- Surge arresters

- Utility metering bays
- Line selector switch
- Duplex switch
- Transformer connections
- Infrared windows for thermal scanning of connections

#### Fuselogic™

Fuselogic is a protection system that provides the ultimate in medium voltage fuse protection. This patented system utilizes the Square D<sup>®</sup> current-limiting fuses with mechanical sensors that function without any auxiliary power requirements. Several combinations of Fuselogic functions can be combined to provide simple blown fuse indication contacts with mechanical lockout to anti-single phasing protection. Anti-single phasing requires the optional stored energy mechanism (SEM). Fuselogic is available on both HVL/cc<sup>™</sup> and HVL switches.

## HVL Switchgear—Quick Ship Program— 5 kV–15 kV, 600 Ampere Features

The HVL quick ship program provides basic fused and unfused load interrupter switch configurations for stand-alone or transformer primary applications. The Quick Ship program offers faster delivery, but with fewer options.

Three-pole, 600 ampere individual HVL switches are available in free-standing indoor (NEMA 1) or outdoor (NEMA 3R) enclosures. The switches used in these enclosures are UL Recognized and are listed under Category IQ 2 in File E1 05 1(M). These switches are available unfused or with provisions for 3-inch diameter Square D<sup>®</sup> current-limiting fuses or for boric

diameter Square D <sup>©</sup> current-limiting fuses or for boric acid fuses. Factory optional accessories include auxiliary switches, extra cable terminating lugs and distribution class surge arresters. The door is mechanically interlocked with the switch operating handle and provisions for key interlocks are standard. Set screw type lugs for one 2solid 600 kcmil copper or aluminum cables are provided for line and load connections. Other standard features include a bolted enclosure with a viewing window, ground pad, and space heater (NEMA 3R only). Control power for heater must be from external source. Fuses are not furnished with this equipment. For fuse information, refer to page DE12-8. Switches are listed on pages DE12-6–DE12-7, and many of the fuses listed on page DE12-9 are available from stock.

Includes fuse holder only. See table on page DE12-9 for fuse refills.
 Note: Switches with transformer connections are painted ANSI 49. Standalone switches are painted ANSI 61.

## Switchgear

#### Medium Voltage Metal-Enclosed—HVL Class 6040 / Refer to Catalogue 6040CT9201

#### **Fuse Selection**

The rule of thumb method for selecting fuses for transformer protection is 1.33 times the self-cooled full load current of the transformer or the next higher fuse rating. Selection of the fuse is the customer's responsibility and should be based on transformer and system characteristics.

 Maximum Fuse Size: Maximum fuse size should be determined by comparing the fuse total clearing curve to the transformer damage curve. Contact Exmas International Solutions Electric for transformer overload and short-circuit withstand capability.
 Minimum Fuse Size:

Minimum fuse size shall carry the transformer magnetizing inrush current of 12 times full load amperes for 0.1 second.

#### Standard Features

- Switches for transformer primaries are cable connected only.
- Key interlocks must be ordered and coordinated by customer.
- · Standard color is ANSI 61 for stand alone units;
- ANSI 49 for switches connecting to transformers.
- If switches are purchased to coordinate with Square D<sup>®</sup> transformers, composite drawings and shipment coordination will not be available.
- Switches are not designed for any special dimensions for retrofit purposes. For dimensions other than shown, contact your nearest Exmas International Solutions Electric sales office or your local Exmas International Solutions Electric distributor.

#### **Ordering Information**

- 1. Select switch catalog number based on fused or unfused and enclosure type.
- 2. Select catalog numbers for factory modifications from the table above.
- 3. If fused, select fuse from table on page DE12-9.
- 4. Price switch and fuses separately. Switches are furnished with provisions only for current-limiting fuse or boric acid fuse.

Square D<sup>®</sup> DIN/E fuses are shown in this table. For fuses produced by other manufacturers, contact your nearest Exmas International Solutions Electric sales office or your local Exmas International Solutions Electric distributor. 

All fuses are single barrel arrangement with ferrule diameters per the chart. Current-limiting fuses will increase the integrated short-circuit ratings beyond the non-fusible units. Contact your nearest Exmas International Solutions Electric sales office or your local Exmas International Solutions Electric distributor.

S&C Boric Acid Fuses
 Type SM-5S fuses are manufactured by the S&C Electric Company. SM-5S has a 25.0
 kA symmetrical short-circuit rating from 2.4 kV to 17.0 kV. For 16.5 kV ratings, only
 S&C boric acid fuses can be used.
 Cutler-Hammer - Westinghouse Fuses
 Type RBA-400 fuses are manufactured by Cutler-Hammer - EATON Corporation.
 RBA-400 has a 37.5 kA symmetrical ampere short-circuit rating from 2.4 kV to 4.8
 kV and 29.4 kA symmetrical from 12 kV to 13.8 kV.

## Masterclad<sup>®</sup> Metalclad™ (UL Listed) Arc Terminator™ Class 60 Refer to Catalogue 60 CT 01 or Brochure

Two-high Masterclad 5–27 kV Metalclad switchgear

Vacuum VR circuit breaker for Masterclad switchgear

Two-high Masterclad 5–27 kV Metalclad switchgear

Arc-Terminator™ arc extinguishing system

\* Breakers do not have a CSA standard to list to.

## Masterclad<sup>®</sup> Medium Voltage Metalclad<sup>™</sup> Switchgear (UL Listed)

#### The Reliability of a Quality Design

The quality of Square  $D^{\mathbb{R}}$  Masterclad medium voltage Metalclad switchgear stems from a design and manufacturing process that focuses on long-term switchgear performance with the highest degree of reliability.

Based on specific customer application needs, Exmas International Solutions Electric engineers and technicians select the appropriate standard sections and bus configurations, with the ability to customize where needed. After the specified circuit breakers, instrument and control power transformers, relays, meters and other components are selected and approved. All are factory-assembled, wired, and tested as a complete assembly.

#### Ratings

| Nominal voltage (kV)               | 4         | 4.16 | 7.2       |              | 13.8 |           | 24        | 4.9 |
|------------------------------------|-----------|------|-----------|--------------|------|-----------|-----------|-----|
| Maximum voltage (kV)               | 4.76      |      | 8.25      | 15.0         |      | 27.0      |           |     |
| BIL (kV)                           |           | 60   | 95        |              | 95   |           | 125       |     |

#### Type VR Vacuum Circuit Breaker

The VR breaker is a horizontal drawout type designed to provide long life, reduced maintenance, and ease of handling. The Type RI advanced design motor-charged stored energy mechanism is a model of reliability with simplicity-with an operating life exceeding ANSI requirements. The VR circuit breaker is UL labeled and includes a permanently mounted manual charging handle.

#### Switchgear Construction

- Floor mounted breaker racking mechanism
- Standard epoxy supports or optional porcelain supports
- Aluminum or copper main bus
- Indoor NEMA 1
- Outdoor NEMA 3R
- Walk-in
- Non walk-in

#### *New!*) Arc Terminator<sup>™</sup> Arc Extinguishing System

Active system detects and controls the effects of internal arcing faults. It complies with ANSI C37.20.7 requirements for arc resistant switchgear for Type 1, Type 2, and Type 2A.

#### Benefits

- Prevents pressure buildup
- Reduces release of toxic materials
- Eliminates need for reinforced switchgear
- Elimnates special requirements for buildings or plenums
- Minimizes equipment damage
- Reduces operating downtime

#### SF<sub>6</sub> Circuit Breakers

The LF and SF Series of SF\_6 Medium Voltage circuit breakers are available for the following ratings

Rated Voltage Rated Current Insulation Level Standards 5 to 38 kV 600 to 3000 A up to 200 kV ANSI and IEC

#### Motorpact™ Medium Voltage Motor Controllers (UL Listed)

Square D<sup>®</sup> Motorpact medium voltage motor controllers are designed and manufactured to tackle the toughest power and process control challenges. Our motor controllers feature industry-first innovations that provide unmatched performance, high reliability, low maintenance and exclusive technologies. Motorpact medium voltage motor controllers are designed to provide the most efficient means to control and protect a wide range of applications and may be configured for motor starting, transformer feeders, capacitor feeders or future spaces.

Motorpact controllers are designed to meet or exceed the standards for NEMA ICS3 Part 2, UL Standard 347, and IEC 60470. UL and cULus labels are standard.

Starting application for squirrel cage induction motors:

- Full voltage non-reversing
- Full voltage reversing
- Reduced voltage non-reversing
  - Auto transformers
  - Solid state soft start

Enclosures are available in Type 1, 1A, and 3R and feature the smallest footprint in the industry at 14.75 inches wide. Enclosures that are 20-inches and 29.5-inches wide are also available for FVNR.

Optional arc resistant Type 2 enclosures are also available.

Units are designed as one-high construction for ease of use with a optimum height for the operator controls and isolation switch disconnect handle.

Full front and or front and rear accessibility are provided. A full height cable pulling area is standard.

Controller voltage ratings range from 2.3–7.2 kV vacuum contactors feature a drawout design and have ratings of 200, 400, 450, and 720 amperes.

Options include live line indicators, blown fuse tripping, solid state protective relays, power factor correction capacitors, surge arresters, surge capacitors and a cable grounding switch.

# Powersub $^{\textcircled{R}}$ Vacuum Substation Circuit Breaker Type FVR (Not UL Listed)

By combining the latest developments in circuit breaker technology with worldrenowned quality, Powersub vacuum substation circuit breakers are the most advanced medium voltage circuit breakers available. The Type FVR Powersub circuit breakers include arc-resistant construction and are built to comply with ANSI standards.

#### **Features and Ratings**

- Voltage—15–38 kV
- 110–200 kV BIL
- Ampere Ratings-600, 800, 1200, 2000, 3000, 3500 and 4000
- Interrupting amperes—12.5–40 kA (rms symmetrical)
- Arc resistant enclosure construction, 2000 amperes and below, based on EEMAC and IEC test standards
- No fans required for 3000 ampere ratings
- Interrupting time of three (3) cycles
- Hermetically sealed vacuum interrupters

The arc-resistant design takes safety to the next level. In the event of an arc, the arcresistant construction provides increased safety for personnel working in proximity of the breaker by venting resultant arc by-products and ionized gases upward and away from exterior panels that otherwise may not remain intact and in place. The Powersub circuit breakers also provide superior protection as a result of their high speed operation. You can expect long life from the product as the vacuum interrupter contacts are protected from corroding elements and contamination.

For further information refer to Bulletin No. C-3-512.

The type NAL 3 pole, load interrupter switch is suitable for use as a main or feeder load interrupter switch or as a primary protective device when fitted with fuses. The type NAL switch can be used in conjuction with current-limiting fuses or expulsion type power fuses.

The NAL switch is available with either a quick make, quick break mechanism, or with the same characteristics and a spring stored energy mechanism which allows the switch to be tripped remotely or used in conjunction with protective relays. The switch can also be automatically tripped after operation of a striker-pin equipped fuse to prevent single phasing. Optional features include motor operators for all types of operating mechanisms, blown fuse single phase pro-tection, and mechanically interlocked grounding switch, Type EB.

Type NAL 3 Pole Load Interrupter Switch
